Work Experience

Jun 2018 – Current

Software Developer
SAAB Group

Software Developer at SAAB Group, Electronic Warfare department. Writing C++98/14 and using modern tools such as Jenkins, Docker, google test, and clang 6.

Aug 2016 – Aug 2018

Teaching assistant
KTH Royal Institute of Technology

Teaching assistant in DD1361: Programming Paradigms, an introductory course into different programming paradigms, such as functional programming in Haskell, and logic programming in Prolog.

Teaching assistant in DD1388: Program System Construction Using C++. The course aims to teach students C++98/11/14 and how to apply the standard library while writing efficient, testable code.

Summer 2016

Consultant
Student Academy

Working at PostNord (The swedish governmental postal service) using their equipment and software to electronically sort letters and packages.

Summer 2010

Software Developer
OpenRatio

Summer intern and developer of their Windows Phone platform, writing pure C# for their enterprise mobile platform. Their platform enabled clients to develop cross platform apps and manage said apps without any programming knowledge, using a platform-independent web interface.

Education

2018 – Present	**Master of Science** Computer Science *KTH Royal Institute of Technology*
2017 – 2018	**Master of Science** Computer Science Exchange studies in USA *University of Illinois at Urbana-Champaign*
2014 – 2017	**Bachelor of Science** Computer Science *KTH Royal Institute of Technology*

Skills

Basic	Golang, MVC, MATLAB
Intermediate	python, css/html, LaTeX, JavaScript, x86 ASM, SQL, git, C#, Bash, Vim, IT Security
Advanced	C11, C++17, GNU/Linux, Haskell, java, Prolog

Interests

Backend systems, high performant C++ code, and compiler construction are my key interests. I also find reverse engineering, pentesting and IT security in general very intriguing.

Projects

Spring 2016

kOS x86_64 OS
Current spare time project
URL: https://tools.wmflabs.org/wikipagestats/

kOS is a 64bit operating system for the x86 platform. kOS is written in C++2a using libc++, libc++abi, and libunwind. kOS is still very much in its planning stages. kOS will feature a microkernel designed for fast IPC and modularity, while still being simple enough for educational purposes.

Summer and Fall 2016

Hattis
Spare time project
URL: https://github.com/EmilGedda/hattis

Hattis is a simple command line interface tool for the online programming problem judge, kattis. Hattis allows users to submit solutions and track the submission progress live, all from the command line. The tool is written in Haskell, exercising modern techniques regarding error handling and correctness.

Papers

Spring 2017

Analysis of The Precision Time Protocol under different forms of system load
Bachelor Thesis
URN: urn:nbn:se:kth:diva-208493

Evaluted the most popular implementation of the Precision Time Protocol, IEEE1588, under different types of system load. This involved setting up a local network of devices and synchronizing their system clocks while stressing different subsystems of the connected devices. The results showed that the accuracy and precision of PTP suffers greatly when a client is under heavy load.
